Receptor-Type Tyrosine-Protein Phosphatase Eta

National Cancer Institute

Source

National Cancer Institute. Receptor-Type Tyrosine-Protein Phosphatase Eta. NCI Thesaurus. Code C37313.

Receptor-type tyrosine-protein phosphatase eta (1337 aa, ~146 kDa) is encoded by the human PTPRJ gene. This protein plays a role in protein dephosphorylation, chemotaxis and the negative regulation of receptor-mediated signaling, cell proliferation and cell growth.
