

Review of: "A Novel Computational Approach for Solving Fully Implicit Singular Systems of Ordinary Differential Equations"

H. O. Bakodah

Potential competing interests: No potential competing interests to declare.

The paper seems novel with new results. I recommend the paper to accepted after the following suggestions are considered:

1. the author should provide numerical validations with other existing numerical methods.
2. Graphical comparisons are needed between the present solutions and the comparing solutions, and exact solutions where possible.
3. Error analysis is highly suggested, if not, the convergence analysis of the proposed scheme should be reported.
4. The author may include updated literature in the area.
5. Bests.
