Benign Metastasizing Leiomyoma of the Uterine Corpus

National Cancer Institute

Source

National Cancer Institute. *Benign Metastasizing Leiomyoma of the Uterine Corpus*. NCI Thesaurus. Code C40173.

A cytologically benign smooth muscle neoplasm that arises from the uterine corpus and has metastasized to the lungs, abdomen, or lymph nodes. It usually presents in women with a history of benign uterine leiomyomas that have been surgically removed years before the extrauterine neoplasm spread.
