Potential competing interests: No potential competing interests to declare.

The numerical approach for solving the systems of ordinary differential equations is well presented. It is not stated of whether both theorems (Theorem 1 and Theorem 2) are formulated by the author of the manuscript or by the other authors in the scientific literature. The examples given are adequate and represents the numerical approach proposed by the author. The references are also adequate. However, there are some mistakes in spelling and sentences. Author should make necessary improvements in the writings.
