The content of the paper is good and insightful. I learned a lot from your paper. But here is some of the review:

1. Maybe you can consider using a software application to perform your data analytics, or if you already use it, please state it in your abstract.
2. The data is not only projected in charts/graphs, but you can give several pieces of information in a table about the classification to support your explanation.
3. Lack of references. Please provide more references in your explanation.
