Respected,

Current brief communication represents a review of the main papers on Long COVID conducted in Mexico. It is very important to improve the Abstract by including 1-2 sentences about the main findings. There is also a lack of the Objective of this communication. Did authors search for literature in some specific database or databases? Are there any inclusion or exclusion criteria? What is the authors' opinion about the quality of the analyzed studies? Are this findings in line with other studies conducted in other countries? I think that addressing this issues will improve the quality of the communication.

Regards,
