

Review of: "[Viewpoint] Vaccination campaigns against Covid-19 may promote vaccine hesitancy toward well-established, safe, and effective vaccines"

Giorgio Mario Cortassa

Potential competing interests: No potential competing interests to declare.

Interesting and relevant paper, functional to identify possible flaws in the vaccination campaign against Covid-19. It may be now really good time to proceed to comprehensive, accurate review(s) of the effects (pro and cons) of the covid-19 vaccination campaign worldwide. Some article is already available (1, 2, 3, 4), but we still miss some comprehensive paper on the topic, which is relevant not only for the issue "per se" but also for - as the Authors emphasize - in relationship with possible hesitancy toward well established vaccines.

As the present paper is just introductory I will then encourage the Authors to proceed to develop such a comprehensive review with the available data, related also to the different kind of vaccines developed and utilized. It will be a huge work, needing an international cooperation, but it will be very interesting and relevant for all of us.
