Potential competing interests: No potential competing interests to declare.

Now, this paper is better in the writing and the way that the author presents the method. It is clear and easy to follow.

Besides that, there are some minor mistakes that need to be observed:

- There are some typographical mistakes.
- I think the author missed the equation numbers from 7-13.
- In my opinion, it is better to leave some spaces between the equations and their numbers.
- Finally, the font size for the examples; I think they should be bigger than that of the solutions, to be clearer.
