Potential competing interests: No potential competing interests to declare.

Abstract has to be modified. It has to be made precise for the smart grid. But it states the overall applications of IoT in all sectors.

The graph shows the overall increase in the use of IoT, but it didn't specify how the growth of the smart grid using IoT from 2015-2024 would be.

Some information about the smart grid in various countries could be compared.

Different configurations of the smart grid can be discussed.

Avoid numbering in the abstract.

The title can be modified as Internet of Things in Various Sectors
