

Review of: "Severe Cutaneous Adverse Drugs Reactions: From Causes To Mechanisms"

Selami Aykut Temiz

Potential competing interests: The author(s) declared that no potential competing interests exist.

Dear authors,

This article is well designed and will contribute to the literature. However, I think it will become much more beneficial to the literature with some rearrangements, as suggested:

1. There are grammatical and typographical errors, which I recommend correcting throughout the text.
2. The discussion part should be developed more, some articles in the previous literature were missing.
