

Review of: "Nanomaterials: History, Production, Properties, Applications, and Toxicities"

K. Divya

Potential competing interests: No potential competing interests to declare.

The review looks very well researched and is filled with information. The authors have painted an incredibly detailed picture of the history of nanoparticle research.

However, the language is extremely basic, and the sentence structure is not correct in many places. It is advised to use the help of an English language and grammar expert in structuring the paper.

Recommend the paper to be accepted with minor revisions.
