**Potential competing interests:** No potential competing interests to declare.

The article on, "A Bibliometric Review of CSR in China Based on CNKI Database: 2006-2022" addresses a current and relevant topic for scientific research in the economic field. The authors develop the concept of CSR and perform a bibliometric analysis, emphasizing the importance of CSR for the development of China's economy. The work is well organized and is useful to economists interested in the development of knowledge in a competitive global environment. The scientific value of this article can be improved by an analysis of CSR at the level of the global economy under the conditions of meeting the sustainability criteria. The research methodology can be extended to objectives that emphasize the future usefulness of the study.
