

Review of: "Differences in Regional Productivity and Imbalance in Regional Growth"

Bin Wang

Potential competing interests: No potential competing interests to declare.

1. We hope that the author will rewrite the abstract. For example, the abstract should indicate the study area and time. In addition, the author should point out the significance of writing this paper.
2. The writing format of the introduction is not standardized. For example, in the first paragraph of the introduction, the author introduces his research conclusions. However, the author did not indicate the source of the data, but only indicated that historical data was used. Therefore, it is not known whether the results obtained are true.
3. The author is expected to rewrite the literature review. The literature review seems to be just a list of articles, without its own theoretical system and comments.
4. There are no recent research results in the reference. Perhaps the author's literature reading is not very comprehensive.
5. The form of the table does not seem to conform to the specification, and the author is suggested to modify it.
