The importance of this study is at the national level and it is suitable to be published in a journal with a local audience. Considering the launch of new treatment settings, conducting such studies and documenting the data is a valuable work that will be useful in the prevention and treatment of addiction in Kenya. But compared to leading studies in this field, it has no place to be published in high-rank journals. In addition, the 2014 world drug report is mentioned, while it is better to use the 2022 report. If there is any data on the prevalence of addiction and kind of drug use in Kenya, they should also be mentioned.
