Potential competing interests: No potential competing interests to declare.

The idea and the implementation is quite good. But there are several issues needed to be addressed for the acceptance of the paper. The comments are below:

1. There are numerous grammatical errors throughout the papers. These mistakes need to be corrected.
2. The references that are cited in the introduction section are very old. Recent papers should be cited.
3. The figure presented for the practical arrangement (Fig. 7) shows a partial view of the the entire setup. The whole arrangement should provide.
4. The comparative performance analysis portion is very short and inadequate. Details comparative analysis with the recent articles should provide.
5. Only qualitative analysis is provided in section IV. Descriptive quantitative analysis should be added.
