Potential competing interests: No potential competing interests to declare.

The authors have prepared an interesting and useful clinical case study whose aim was to describe the treatment of Post-Covid-19 syndrome patients with PAMP immunotherapy.

However, I would like to make a few observations before recommending their work for publication.

1. Please, could the authors add the objective(s) of their research?
2. I consider it an important limitation that the authors have not used validated questionnaires. Why did the authors use, for example, EQ-5D - EuroQol or the DePaul Symptom Questionnaire?
3. Cases 2 and 3 should be described in more detail.
4. Please submit an approval from an Ethics Committee.
5. Could the authors add a Graphical Abstract?
6. I recommend to the authors that in the introduction section they briefly develop the respiratory and rehabilitation parts, for which I leave some high-quality works:
