I'm not an expert in this field, but the paper is indeed interesting, and as a fan of Pamuk's writing, I believe it offers something new to the discussion of his work. However, I think the manuscript would benefit from a) tables formatted in APA style and b) using R instead of Excel to make the figures. These aren't only aesthetic decisions, but it would be easier to read some of the figures that are a bit too small to follow properly. Not to mention that pairing them in panels would save a lot of space.
