**Potential competing interests:** No potential competing interests to declare.

The article provides an analysis of the challenges faced by Turkish agriculture in the context of climate change. While the topic is interesting, several improvements need to be implemented in order to enhance its overall quality and impact.

The article's structure lacks clarity, making it difficult to follow the methodology, results, discussion, and conclusion. To enhance its scientific impact, restructuring the article with an IMRaD format (Introduction, Methods, Results, and Discussion) would improve its organization.

The manuscript contains numerous claims, arguments, and pieces of information that lack proper citations to their sources.

In conclusion, the paper requires revision and enhancement with stronger arguments pertaining to climate change.
