Thank you and respect

I learned new things from reading this valuable review article.

The article is smooth and good.

Mention a few questions and points to help improve the article:

- Can you provide specific examples or mechanisms of pathophysiology to be added to the discussion section, especially in numbers 5 and 6?
 - Could you suggest additional references or studies that support the use of ORS based on probiotics and the smart ID medical bracelets?
 - Can you elaborate on how the suggested preventive strategies can be practically implemented during the Hajj?
 - Can you provide more detailed feedback on the clarity and coherence of the article's argument regarding the link between dehydration, hyperthermia, and hyperglycemia?
- Complete the conclusion.
