Potential competing interests: No potential competing interests to declare.

This study is very interesting and very important when developing point-of-care diagnostic tools to improve patient care. It is definitely a necessary contribution to the body of knowledge, especially for developers of healthcare interventions that can be used in remote settings. However, before this article can be considered for publication, the following points need to be addressed:

1. The title and the aim need to align. Maybe rephrase the aim so that it aligns better with the title?

2. When introducing your sections, briefly explain how they tie into your main aim of the research.

3. Read through your article and try to improve the flow of the paper to make it more readable, especially section 2. Please also correct some of the grammatical errors that you will come across.

4. Briefly explain the 4 phases of user-centred design.

5. What is the purpose of Q1 and Q2 where they appear? Introduce them if they need to be there.

6. Please give the flow diagram with the phases a title. For example, "Figure 1."

7. Do you plan to do a study with a larger sample?
