GAIA Level 2 Major External Structural Defect

National Cancer Institute

Source

National Cancer Institute. *GAIA Level 2 Major External Structural Defect*. NCI Thesaurus. Code C127958.

GAIA Level 2 Major External Structural Defect is defined by four criteria: first, the defects are of a prenatal origin; second, at least one of the following requirements must be met: a) Alterations in the external anatomy that are present and visible at the time of live birth, and that persist beyond the immediate peripartum period unless surgically repaired OR b) Alterations in the external anatomy that are present and visible in a stillbirth or in the products of conception of a spontaneous or therapeutic abortion; third, the defect(s) affect (or have the propensity to affect) the health, survival, or physical or cognitive functioning of the individual; fourth, there must be documented confirmation of a diagnosis made by a clinician with some experience diagnosing congenital anomalies.
