Thank you for submitting your valuable research on this forum. Highly appreciates your efforts. Most of the other reviewers have great incite on the article, to which I agree the most.

Here are a few suggestions and observations.

1. The word "Views" is not a scientific word that should be used in the research article title as it creates vagueness. I suggest changes to your title.
2. Your objective does not coincide with the study findings or methods. Please include all the subjects in your adjectives.
3. Ethical approval must be taken from all institutes where the study is conducted, with their approval numbers mentioned clearly.
4. Questionnaire validation with parent developer agreement must be clarified.
5. The results section has some confusion in different sections and a lot of repetition and clerical mistakes in the tables that need correction.
6. I failed to understand why medicine and dentistry are not considered separate variables, as there are significant differences, especially in the final years of studies.
7. The discussion section is too long, but the information is not conclusive. The significant findings must be highlighted and compared with other studies.
8. In the recommendation section, mentioning nursing inclusion is not necessary as it doesn't fully reflect the domain of this study.
9. Please use 5 or fewer than 5 years old references, and a maximum of 15-20 for this article.

GOOD LUCK
