Review of: "PSO and the Traveling Salesman Problem: An Intelligent Optimization Approach"

Subhradip Mukherjee¹

1. IIOT, MVJ College of Engineering, India

The authors proposed PSO and the Traveling Salesman Problem: An Intelligent Optimization Approach. This research needs to address several issues. The authors ought to reevaluate their writing with a more exacting technical approach. Here are my particular remarks:

- It's unclear how the proposed method is novel and effective. The total research paper needs more clarity. Equations are not well explained.
- Results are not convincing. More results should be added. Real-time results would be better.
- No comparison with the latest algorithms (ACO, ALO, BWO, etc.) is shown in the study.
