

Review of: "Cost Analysis of NIO Inc."

Muhammad Umar Javed

Potential competing interests: No potential competing interests to declare.

The authors have provided a comprehensive study on the cost analysis of NIO. It is worth appreciation. However, the following points need to be discussed.

1. There should be a vivid comparison between the vehicles in the idle state and the vehicles running on the roads.
2. The study must include a comparison of NIO Inc, with different real-time electric vehicles like Nissan, BMW, Audi, Tesla, etc.
3. The state-of-the-art literature must be included in the work and the limitations be explicitly mentioned so that the readers may have a better idea.
4. Proper justification must be provided for all the behavioral changes observed during the study and for selecting the specific parameters,
