Dear's authors, I send you the comments of paper.

The importance of this study is very important in this area.

I accept this paper for publishing in this journal with the following recommendations.

1-The authors must order the tables and figures.

2-The authors should add only one conclusion.

3-The authors should add the equations in the sample size.

4-The authors should explain whether the sample size is probabilistic or not and the reason.

5-This is to be able to support the following: The number of our patients is small. However, the prospective nature of our study helped to reach useful conclusions, as we were able to correlate clinical signs with polygraphy and allergology profiles of the patients.

6-Note: If the sample size is adequate or not, change the text.
