

Review of: "The Positive Impact of Dropping the Lowest Test Score on Academic Performance and Stress Levels in MathBased Graduate Courses"

Némesis Larracilla-Salazar

Potential competing interests: No potential competing interests to declare.

The article proposes an interesting piece of work, I believe that it can be improved if the focus of the introduction is focused on anxiety and stress instead of starting with suicide, which is not studied or analyzed in the article.

Regarding the methodology, it would be important to highlight the purpose of the evaluations and their composition; Likewise, it is required to add the sampling method and technique. It is necessary to clearly describe the variable analyzed since after analyzing the complete article the interest falls on the exposure to the evaluation of the students and their scores by application (performance) so that the measurement of stress levels is not reflected.
