

Review of: "Yield Forecasting Model for Maize Using Satellite Multispectral Imagery Driven Vegetation Indices"

Nirmala S. Guptha

Potential competing interests: No potential competing interests to declare.

Overall paper presentation of the work and content is Good, the scope of the paper is under the specification on this article, I would recommend the following changes

1. The paper abstract need to be re-framed under prospect of technological enhancements.
2. Introduction needs to be aligned, with new challenging and enhancements in latest development.
