This is an extremely interesting and innovative application of photobiomodulation.

Some improvements could be made.

Title: Low-Level Laser.

The accepted term since 2015 is Photobiomodulation (PBM) or photobiomodulation therapy (PBMT). Replace LLLT in the complete manuscript.

Abstract

"This study aimed" ... please replace it with this case report

Introduction

Photobiomodulation (PB) replaced by (PBM).

To improve the quality of your introduction, it is necessary to include the appropriate references in the first part of it.

Please rephrase the following paragraph:

"PB can also be combined with medications and food supplements, producing synergistic effects to these therapeutic substances, sometimes reducing the dosimetry of these substances, and reducing the adverse effects of these substances on the patient".

Case report

"The treatment protocol consisted of 2 weekly sessions performed for 3 months (33 sessions)".

2 weekly sessions performed for 3 months: 24 sessions

Results and discussion

"It should be noted that when we apply photobiomodulation for several minutes to oncological patients or those with a previous history of oncological pathologies, the application time must be reduced as much as possible".

This section is off-topic. Please focus on PBM basics and mechanism of action.
