Triaminic Allergy Congestion

National Cancer Institute

Source

National Cancer Institute. *Triaminic Allergy Congestion*. NCI Thesaurus. Code C29513.

Any commercial combination preparation, by Novartis, containing the decongestant pseudoephedrine hydrochloride used to relieve symptoms of cold and flu.

Pseudoephedrine hydrochloride, a sympathomimetic agent, stimulates alpha-adrenergic receptors and causes vasoconstriction. This reduces blood flow, decreases swelling and prevents nasal and sinus congestion.
