Potential competing interests: No potential competing interests to declare.

This is a short position paper providing a broad-stroke perspective on AI and reading. Many of the arguments are not new but can be traced back to the studies on e-readers, while others, more specific to AI, are not truly developed. It is not clear to me what the new perspective offered is, as, in its current form, it reads as a reinstatement of tropes about reading. In my honest opinion, the topic deserves a much closer look and probably a new angle to make a significant advancement in the cultural discourse we need.
