Potential competing interests: No potential competing interests to declare.

The study has an interesting choice of research topic and also conducts micro-surveys with a high workload. There is room for improvement as follows: 1. the conceptual model is disconnected from the subsequent analysis and lacks in-depth analysis. 2. the descriptive analysis is mainly conducted through graphs and tables, and the information conveyed by the graphs and tables is duplicated, so it is not necessary to use both graphs and tables to express the same information at all. 3. there is a lack of in-depth analysis of the reasons why gender and age affect mobile phone recycling and stockpiling behaviour in the UAE. 4. the research conclusions and the policy implications could be separated and the policy implications could be reinforced.
