Review of: "The Process of Polypharmacy Management in Older Adults: A Grounded Theory"

Labib AL-Musawe¹

1. Independent researcher

Thank you for giving me the chance to review this paper, and comments for authors are below:

1. Title: I think the authors should change the title to "Key components of polypharmacy management in older adults from the patient's perspective."
2. Abstract: In the objective, it's better to use "identify" instead of "describe and explore." Did the authors select the participants from both medical wards and day hospital services?
3. Introduction: The introduction needs to be rewritten with connected paragraphs.
4. Methods: How did the authors calculate the sample size? Based on which reference did the authors define that patients are elderly? The exclusion criteria should be mentioned clearly.
5. Results: What chronic diseases do the participants have? What types of medications do they take?
6. Discussion: The discussion should not have a repetition of results; a deeper explanation of them is required. A comparison with previously published studies is required.
