Dear Authors,

Below are my comments for your consideration and further action;

- (1) Kindly consistently used the short form "SME" or "MSE"?
- (2) Please re-check on the spelling
- (3) The research framework proposed 5 Independent Variable (IVs). For each IV, what are the elements/ factors to explain each IV.?
- (4) Under para 4.2 - Test of a Questionnaire is meant for the pilot study with N=30 samples only.

What are the reliability test value (%) for all the actual survey with N=170 respondents?

- (5) The analyses done were very simple and basic.

The paper will be meaningful if more ROBUST analysis can be performed by using the Multiple Factor Analysis.

Best regards,

Dr Abrari Salleh
