The article is written well. The abstract looks appropriate, but if a few lines about the stats are added, it will look better. The research in question is new to literature, although it has some bias but can be considered. The introduction is written well, with very few mistakes. The methodology is according to the standards. The results are elaborated well with good statistical analysis. The tables and graphs are elaborate and self-explanatory.

The research on the use of the PANAS scale is unique and can be considered for publication after some basic corrections.
