Potential competing interests: No potential competing interests to declare.

Overall, this study provides important insights into the influence of socioeconomic conditions of parents on Christian teachers' personality. These findings have important implications for educators and policymakers and highlight the need for further research in this area. Here are some suggestions to enhance the quality of the paper. By addressing these suggestions, the paper can be strengthened and more effectively communicate its message to the reader.

Introduction

1. It would be helpful to provide some context on why the study was conducted. This would help readers understand the particular challenges and opportunities facing teachers in that context.
2. The introduction mentions several key terms, such as "competence" and "personality competency," without providing clear definitions. Defining these terms early on would help readers understand the rest of the paper more easily.
3. The introduction makes several claims about the importance of teacher personality competence, but it doesn't provide much evidence to support these claims. Adding examples or data to illustrate the impact of teacher personality competence would make the argument more persuasive.
4. The statement that violence by teachers is the best way to educate children with discipline is highly controversial and contradicts with the principles of positive discipline and child protection. This issue needs to be addressed with a more in-depth discussion and understanding of the consequences of violence towards children.
5. The sources cited seem to have differing opinions on the influence of socioeconomic status and parental background on the personality competence of teachers. While some studies suggest that highly educated parents are more concerned with their work and may neglect their children's emotional needs, other studies argue that parents with higher education can provide more theoretical, empirical, and rational approaches to character-building for their children. Therefore, it is important to further examine the factors that affect the personality competence of teachers and how these factors interact with each other.

Method of the study

1. The authors should specify what type of research design used. It is important to provide more information about the design of the study, such as whether it is experimental, correlational, or descriptive quantitative.
2. Provide information about the instrument used to collect data, such as whether they were surveys, questionnaires, or

interviews.

3. The authors used a saturated sampling technique but, unfortunately, they did not provide more details on how they selected the 50 teachers. From this viewpoint, the authors should explain how they identified the population and how they ensured that all members of the population were included in the sample.
4. The authors did not provide any information on how the obtained data were analyzed.

Results and Discussion

1. It is not recommended to include detailed information about methodology in the results section of a research paper. Providing information related to the methods used in the **Method Section** allows the reader to understand how the study was conducted and to assess the validity of the results.
2. The results section should focus on presenting the findings of the study and should be concise and clear.

Conclusion

1. It would be helpful to provide some context on why the findings are important. This can help the reader understand the significance of the research and its potential implications for the field.
2. The conclusion could benefit from a brief discussion of the limitations of the study. This can help the reader understand the potential weaknesses of the research and areas where future studies could improve upon the findings.
3. It may be helpful to provide some recommendations for future research based on the findings. This can help guide future studies and build upon the current research.

Thank you very much. Good luck!

Best regards from Singaraja, Bali, Indonesia.
