Potential competing interests: No potential competing interests to declare.

Overall, the paper seems to be interesting and well conducted, with relevant themes for the scientific community. The scientific information about host immunity is clearly written. Everything about vaccines and the role of boosters is comprehensively written. The conclusions are well summarized. The results are clear and concise formulated. The figures provided are clear and legible, with quite enough explanation.

But, I only have a few comments:

This paper does not show something controversial.

The article should have been better structured, in order to highlight: what is known, what is new, how the research and the results will change the day by day medical activity in hospitals, what is to be determined in future.

The abstract is not enough comprehensively described. Also, the introduction does not have enough details.

Minor revision
