**Potential competing interests:** No potential competing interests to declare.

Please add to the end of the title [...] holotype of the genus *Ctenomys* Blainville 1826 (Mammalia: Ctenomyidae).

M. Florent-Prevost from the interior parts of Brazil, specifically from the province of "las Minas"- Is it possible to track where the collector passed?

Regarding the first notice of the "las minas" locality, it can be mentioned: at first glance, it was supposed to be Minas Gerais, but [...]

Add a taxonomic table- Nominal species arranged in alphabetical order (names as originally described containing scientific name plus authorship) followed by columns with the names as in the proposed synonym.

Taxonomic decisions are very important and should be clearly informed in the publication.

It is very important work. I congratulate the authors.
