# Myeloid/Lymphoid Neoplasms with FGFR1 Rearrangement

National Cancer Institute

## Source

National Cancer Institute. *Myeloid/Lymphoid Neoplasms with FGFR1 Rearrangement*.

*NCI Thesaurus. Code C84277.*

Hematologic neoplasms characterized by the rearrangement of the FGFR1 gene, resulting in translocations with an 8p11 breakpoint. Patients present with a myeloproliferative neoplasm, acute myeloid leukemia, lymphoblastic lymphoma/leukemia of T or B-cell lineage, or acute leukemia of mixed phenotype.
