Potential competing interests: No potential competing interests to declare.

1. The researcher did food diversity analysis in the study, it would be necessary to put this information in the article and clearly stated in the methodology
2. The additional variable on nutritional status assessment is important to clearly support the occurrence of malnutrition. In defining the poor water source, please put the standardized classification of poor source of water.
3. Overall, the magnitude of the problem was high and this information is necessary to be published. Good work !
