Review of: "Optimized Low-Powered Wide Area Network within Internet of Things"

Zlatin Zlatev

Potential competing interests: No potential competing interests to declare.

The paper is well structured all of the results are presented correctly. The authors propose optimization method for IoT networks.

Make better description of figure 3.1

It will be good to add gridlines to figure 4.1

5. do not have title

Conclusion. Where the results can be implemented in practice? How the work will be continued? What are the limitations of this work?
