Potential competing interests: No potential competing interests to declare.

1. The abstract lacks methods, results, and conclusion
2. Statement of the problem
with introduction part
Some ideas overlap
3. Methodology
Despite you explained that multiple regression model was used to analyze the relationship of key variables with a view to addressing the research objectives, I did not see any analysis of such type. You calculated only percentage.
4. No ethical statement (Approval)!(As it involves human participants)
5. You said previous studies did not address how procurement planning practices affect performance and you explained it's the objective of your research. However, I did not see in your research finding how procurement planning practices affect performance. (Predictor vs outcome)
6. In your methodology, you used qualitative method (In-depth interview). But there is no narration of such findings
7. Use latest literature with appropriate reference style (In the introduction part you used the Vancouver system; in others Harvard system)
8. In conclusion, it seems some part of the manuscript is missing (For example, In the methodology, regression analysis, qualitative study design were included. However, there is no regression analysis (Predictor vs Outcome), no narration of findings from the in-depth interview(qualitative study)).
