Review of: "Enhancing Science Education with Learning Management System for Effective Learning Outcomes"

Tine Pajk

Potential competing interests: No potential competing interests to declare.

Congratulations on your article submission!

I think there are some aspects to consider in order to improve your article:

Contribution to science: think about how your article could contribute to scientific research. Perhaps you could include new data, analyses or research methods that will contribute to a broader understanding of the topic.

Conclusions: Include clear and comprehensive findings from your research. Highlight what you have learned and what implications this has for the topic.

Conclusion and conclusion: The conclusion of the paper is a crucial part as it provides a summary of your findings and key points. Make sure you summarise the main findings in the conclusion and link them to the main purpose of the paper.

I wish you continued work, the results will be visible. Good luck!
