Potential competing interests: No potential competing interests to declare.

After reviewing the manuscript titled "MCDA - Groundwater prediction analysis for Sustainable Development using GIS Supported AHP in Okeigbo, Southwestern Nigeria," I recognize the value of the work put into this research. While the paper exhibits potential, there are some sections that need improvement.

1. I think the methodology used needs to be better detailed, making it clear what was done and how it was done. It is not clear in the manuscript the main point of the methodology applied.
2. Check all abbreviations and make sure they are explained in the text (I got lost many times).
3. Please check the numeration of all figures and make sure it matches with the sentences in the whole manuscript. Also, introduce figures after they are cited in the text.
4. The results deserve a little more care, sometimes the text is confusing, and it is difficult to understand what is being said. I believe a more careful description might help in this section.

I recommend a further revision/correction of the text before publication.
