Potential competing interests: No potential competing interests to declare.

Although I think this is an interesting piece of research, I would still like the authors to refine the following questions:

1. There are too many basic knowledge about CFD in the article.
2. Have you done grid-independent and time-step-independent tests to verify the reliability and convergence of the grid?
3. The conclusion part is not concise enough, it seems to be writing a review, the conclusion part should be short.
