Dear Editor

Thank you for inviting me to review the manuscript.

Methodology:

This study's methodology only included research articles published between January 2007 and December 2018. It's possible that this limited range of dates could have excluded relevant studies conducted before or after this period. Is it possible to add more recent studies till 2023?

This review also has selected 71 from 2923 articles. I consider the author to add a flowchart to give more information on why there were so many excluded. This restriction might have excluded some significant findings.

Results:

on the **Table 1**. Traditional Use of Botanicals, I recommended adding the antibacterial activity (MIC (Minimum Inhibitory Concentration) or ZOI (Zone of Inhibition)) for each plant. It could give more information about the effectiveness of the plants as antimicrobial agents. Additionally, could you provide information on the appropriate dosage of each herb to achieve an antimicrobial effect?

Best regards,

Ami Febriza
