The paper on the "Design and Realization of a Low-Cost Smart Walking Aid for Visually Impaired and Blind People" is a commendable effort in addressing mobility challenges. The authors successfully blend innovative design with practical implementation, emphasizing cost-effectiveness. The integration of smart technologies and user-centric testing adds significant value. However, providing deeper technical specifications and addressing limitations would enhance the overall robustness of the paper. Overall, it's a valuable contribution to assistive technology for the visually impaired.
