In this article, a comprehensive bibliographic study has been attempted on leishmaniasis research. Researchers have been able to do this work comprehensively well. Of course, it seems that this research suffers from some issues, the most important of which is neglecting the uniformity of keywords. In other words, as seen in Figure 8, keywords that have a single meaning but are not integrated have been included in the analysis. This problem will be solved if the researchers perform the homogenization stage of the keywords before conducting the co-occurrence network analysis.
