Potential competing interests: No potential competing interests to declare.

Investigating this research problem is both relevant and captivating when considering libraries in developing countries. However, the research objective laid out in the manuscript is not discernible. The author must specify whether he wants to learn about the state of the digital transformation in Bangladesh public libraries or how the digitization initiative has affected Bangladesh public libraries. The author should provide additional information to explain how he conducted their literature review and explain the reasons why he wanted to learn more about the digital transformation of other countries.
