Potential competing interests: No potential competing interests to declare.

The introductory part should be better worked; many paragraphs are loose ideas, and at the moment, there is no common thread. Organize them better into 3 large paragraphs.

The results do not show any analysis, nor do they speak of the relationship between the fisheries and how they were analyzed. They should not go into a discussion of results, since for this section, the analyses must be resolved and quantified.

Concepts are confused in part 6; it says "climate change is considered one of the causes of this decline," and there is no time series of more than 30 years to see this signal. It is very delicate to draw these conclusions with work with little information.
