Reviewer Comments: the Research Paper, Qeios ID: 7O20JP: Development of Education for Sustainable Development Integrated Coastal Conservation Education Kit in Junior High Schools.

The purpose of the document, through the edudokit, is to give students a tool capable of "providing adequate solutions". I believe that improvement solutions must not be provided by the students using this tool. Still, they can become aware of the problem and acquire valuable information to become specialists capable of dealing with the problem and then become good technicians at the end of their school career.

The Abstract is adequate and explanatory, I suggest changing the abrasion to coastal erosion.

In the Introduction, the sentence: "Coastal changes can be in the absence of the land (wear) or changes in the coastline to the sea (accretion)." I suggest changing the sentence like this: Coastal changes can be in the absence of the land (erosion) or changes in the coastline to the sea (accretion).

The Conclusions section should be revised more incisively to emphasize the findings of this study.
